Concerning Docket 25-133 "DELETE, DELETE, DELETE"

Obsolete rules that limit flexibility for a licensee to pick how best to serve their public audience are below;

(1)AM broadcasters have not been allowed to LICENSE permanent synchronous slave (booster)operation to this date. FM broadcasters have been allowed to license synchronous "boosters" for many years with excellent results providing improved service to listeners within the predicted primary contour while AM broadcasters requesting similar synchronous slave "booster" operation have only been allowed to file for a temporary STA to "test" such operation for a limited period of time. I have personally been involved in several such STA "tests" and have found all of them to be totally successful with dramatically improved service to the public. The FCC has limited licensees ability to serve their public audience despite 50+ years of succesful "demonstrations" of the viability of synchronous booster service in the AM broadcast band. It is time to allow long term licensed improved service to the public using the best technology the licensee wishes to use.

Respectfully Submitted
